NeuroRestorative Program

Research shows functional, everyday tasks are the truest, most impactful means to improve neurologic function. Whether a patient has traumatic brain injury, stroke, or Parkinson's disease, our therapists use their specific expertise to improve patients' function to live life to their fullest where it matters most – in their home.

Serving Patients With:

- Stroke
- Brain injury
- Spinal cord injury
- Encephalopathies
- Parkinson's Disease
- Neurological disorders impacting function

Serving Patients By:

- Comprehensive assessment of motor, cognitive, and neurologic functions
- Task-specific training aimed to improve function
- Swallowing evaluation and treatment
- Safety education and training
- Caregiver specific training

NeuroRestorative Treatment Matters By:

- Easing the strain of leaving the home after treatment for neurologic conditions
- Promoting steadier standing, walking, and movement
- Improving functional use of affected limbs
- Compensation for cognitive changes and strategies to improve function
- Using adaptive devices to improve communication and independence
- Utilizing techniques to improve activities of daily life, like toileting and bathing

Our NeuroRestorative Team:
